## MASONRY ANCHORS

**BREMICK**  
FASTENERS  
[www.bremick.com.au](http://www.bremick.com.au)

# Bremick Values

## Trust

We take pride in the quality of our products and services through design, development, manufacturing, logistics and after sales service to our extensive network of authorised distributors.

## Innovation

Bremick product development teams are continually monitoring industry trends and end user needs resulting in a constant flow of innovation, bringing real value to consumers and distributors alike.

## Quality

Our quality systems ensure strict conformance to national and international standards through rigorous test and inspection procedures throughout our manufacturing processes together with extensive compliance testing of finished product at our purpose built laboratory in Sydney.

## Reliability

Bremick has been the leading Australian fastener supplier for over 40 years with 15 factory warehouses across the Pacific Region, all of which are linked by a centralised computer system, ensuring efficient service and on time delivery to all of our valued customers.

Established in 1965 Bremick Fasteners provides over 40 years experience in the manufacture of high quality fasteners for performance conscious professionals in construction, manufacturing, mining & petro-chemical industries. Bremick Fasteners is the largest Australian owned and operated fastener organisation with 15 factory warehouses situated in all major capitals in Australia and New Zealand. Bremick Fasteners products are readily available through an extensive network of authorised specialist fastener and engineering distributors covering all geographies in the Asia Pacific Region.

To support customers that serve the Construction & Building industries we provide an extensive offering of specialist anchoring products ranging from high performance load controlled anchors to plastic toggles.

For many years Bremick has successfully supplied fasteners for use in major engineering projects and remains conscious of the fact that many of its products are used in critical applications. Bremick holds the view that it has a social, as well as a legal responsibility to ensure that the quality of the products supplied can be fully relied upon and are manufactured in accordance with Australian and International Standards.

To ensure all products meet industry standards the company has made considerable investment in plant and equipment to ensure prompt and reliable delivery of economical high quality anchors.

Bremick is the largest Australian owned and operated fastening organisation.

Before any Bremick product is released into stock the Bremick Quality Team must be satisfied that the product meets the requirements of any respective Standard, customers specifications and is in full conformance with our own stringent specifications.

Prior to approval and certification all bolting product is rigorously tested at the Bremick NATA Accredited Test and Inspection Facility at the National Distribution Centre in Sydney.

These tests are in addition to, and in many instances repeats of prior tests undertaken on raw materials and during the manufacturing processes.

In addition random samples of finished product are periodically sent to specialist testing organisations for independent, third party assessment.

All test data and inspection records are then accurately archived against each job/batch number to facilitate total traceability prior to approval and certification of the final product. Any product that does not meet the specification is strictly quarantined and will not be allocated to stock.

Once completely satisfied that all criteria has been met the Bremick Quality Manager will release the final product to stock.

Our customers can be assured that all delivered product has been rigorously tested.

All testing is undertaken in accordance with AS ISO/IEC 17025 and all testing facilities are accredited under the National Association of Testing Authorities (NATA) Scheme.

“

Customers can be assured that all product has been rigorously tested.

”

**ANCHOR PERFORMANCE**

The Bremick product development team have incorporated “best practice” design features into all Bremick design drawings and manufacturing specifications, raising the “bar” in anchor reliability and performance.

**TECHNICAL INFORMATION**

This Catalogue now contains comprehensive technical information for our entire masonry anchor range.

- Setting Instructions
- Installation details
- Recommended Loads in all materials
- Product Applications
- Suggested Specifications

**ENGINEERING DESIGN DATA**

A comprehensive set of constantly updated engineering design manuals are available from our web site

- Full Technical Information
- Design Loadings
- Spacing & Edge reduction factors.
- Steel Capacities Bremick

“

Bremick design features raise the “bar” in terms of anchor reliability and performance.

”

**10 PACKAGING**

For many years the Bremick Brand of Masonry Anchors have been supplied in bulk packet quantities for high volume industrial users. To meet the needs of Bremick Distributors that also serve lower volume trade or DIY customers we have expanded our packing range to include:

**Bulk Industrial Cartons**

For industrial users and listed in this publication.

**Individually Bar Coded Anchors**

For specialist Retail hardware outlets with check out scanning facilities.(for further details see our Retail Hardware Catalogue)

**Carded Anchors**

Designed specifically for the home enthusiast DIY market (for further details see our Retail Hardware Catalogue).

For further information on our Retail Hardware fastener range please refer to our Retail Hardware Catalogue.

“

Finding the right anchor for the job has never been so easy.

”

## 12 PRODUCTS

In addition to our specialist range of high quality masonry anchors Bremick also takes pride in the solid reputation that has been built over the years heralding Bremick as the foremost fastener supplier in Australia and New Zealand.

Bremick is your “one stop shop” for all of your fastener needs:

- MASONRY ANCHORS
- SELF DRILLING SCREWS
- RIVETS MILD STEEL FASTENERS
- HIGH TENSILE FASTENERS
- STRUCTURAL ASSEMBLIES
- THREADED ROD
- STAINLESS STEEL FASTENERS
- SOCKET SCREWS
- PETRO CHEMICAL STUD BOLTS
- RETAIL FASTENERS

For more information visit our website  
[www.bremick.com.au](http://www.bremick.com.au)

# BREMICK

“

Bremick is the “one stop shop” for all of your fastener needs.

”

14 HIGH PERFORMANCE FASTENING SOLUTIONS

The Bremick **Brembolt™** range of heavy duty Load Controlled anchors are designed and manufactured to the most stringent of International Standards, European Technical Approval Guidelines (ETAG). The **Brembolt™** anchor also meets the requirements of Australian Standard AS 3850 and is also approved for use in “Tilt-up Concrete Construction”, and heavy duty fastening of structural steelwork.

**Suitable for structural use in:**

- Non Cracked Concrete
- Cracked concrete (Tension zone)
- Dynamic loading
- Shock loading
- Fire rated
- High shear and tensile loadings.

**Applications**

- Structural Steelwork
- Machinery
- Heavy pipe supports
- Tilt –up props & braces
- Heavy racking

Hexagonal Flush head property Class 8.8 high tensile bolt for maximum tensile capacity.

Designed & manufactured to the most stringent European Standards.

Large diameter Class 8.8 hardened washer

High Shear resistance from super heavy class 8.8

Compression ring enables full bolt tensioning & maximum clamping power

Hardened expansion sleeve with undercutting blades for high load transfer & resistance to shock loading.

Hardened precision machined expansion cone

The Bremick Masonry screw anchor incorporates the very latest “state of the art” European design features and technology. Manufactured from high tensile steel this single component anchor is the most versatile anchor in the market providing high performance fastening in almost any base material.

**Suitable for structural use in:**

- Concrete (all grades)
- Brick
- Block
- Stone
- Marble
- Timber

**Performance Features**

- Single piece anchor
- Fully removable
- High tensile (Property Class 8.8)
- Galvanised or Zinc Plated
- Close to edge application
- Close anchor spacing
- Highly versatile

25° Helix angle for ease of application & optimum capacity

Hexagonal Head Clearly head marked with major diameter and length

High performance structural fastenings, suitable for use in all common base materials.

Flush head and flange head options

Coating Zinc plated or fully galvanised for external use

Broad thread pitch for optimum performance in all base materials

Long point taper for faster thread engagement

Case hardened thread for efficient self tapping into a wide range of base materials

Double helix relief thread ensures alignment and reduced driving torque

18 NEW PRODUCTS

The new **Bremfix™** chemical anchoring systems incorporate the very latest European chemical formulations. Developed by the foremost industrial chemists in Switzerland, the **Bremfix™** range of adhesive anchors offer economic and reliable fastening solutions for all applications and in virtually any construction environment.

**Bremfix™ Epoxy**

Produces the highest possible bond strength even on the most demanding construction projects and is especially suited for large diameter applications, rebar anchoring and for general use in wet or tropical environments.

**Bremfix™ StyFree EASF– NEW Formula & Cartridge**

Replacing the polyester based Bremfix™ Styfree with our new Epoxy Acrylate Styrene Free chemistry giving 25% higher performance and greater reliability, even underwater.

**Bremfix™ Poly – NEW Larger Cartridge**

The same very popular and highly economic polyester resin is now contained in larger 410ml cartridges giving you 10% more value.

**NEW Outer Quantities**

All Bremfix™ Injection systems are available in smaller pack quantities.

Bremfix™ Poly - 6 cartridges

Bremfix™ Styfree - 5 cartridges

Bremfix™ Epoxy - 6 cartridges

Developed by the foremost industrial chemists in Switzerland.

**NEW Bremfix™ Epoxy**

- Reduced order quantities

**Bremfix™ Styfree**

- New chemistry.
- New Cartridge.
- Reduced order quantities

**Bremfix™ Poly**

- 10% more
- Reduced order quantities.

Credited with the invention of the worlds first plastic anchor (the “Igel” nylon expansion plug) in 1958 KEW® has been in the forefront of innovation and quality for 6 decades. KEW® plastic anchors also feature the unique “triple-split design” for high performance and ease of installation. Designed, developed and manufactured to the highest European Standards, by Kunststoffzeugnisse GmbH in Wilthen Germany, KEW® plastic anchors are the Worlds most innovative and dependable plastic anchors.

The KEW® range of plastic anchors have are highly respected across Europe and are now exclusively available from Bremick Fasteners.

**The KEW® “Triple-Split” expansion vs. “Double-Split” expansion.**

**KEW® triple-split Design**

-  Expansion in three directions and two areas
-  Contraction in two areas  
Contraction plus forming a strong knot
-  Load distribution in three areas  
Screw can be installed easier and faster

**Double-split Design**

-  Expansion in **two** directions only
-  Load is directed in **two** directions only

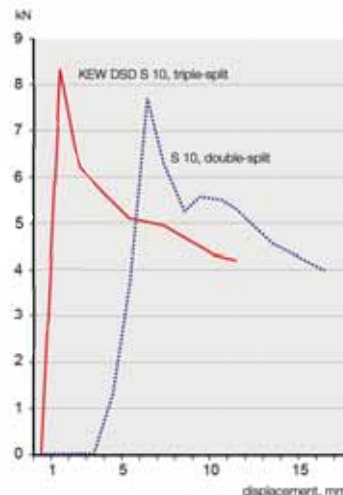

**The influence of “Triple-Split” technology over inferior “Double-Split” products.**

The KEW® expansion design combines the lowest required installation forces and displacement with the highest possible “pull out” loads.

**Tightening force required**  
(Triple-Split much easier)

**Pullout loads achieved**  
(Triple-Split - higher loads and less displacement)

In 1958 KEW® invented the Worlds first plastic anchor.

### KEW® FRAME ANCHORS

For Use in:

- Concrete
- Solid Brick/Block
- Hollow Brick / Block
- Aerated block
- Board materials

Head designs:  
Countersunk Torx  
Or Hexagonal

### KEW® SUPER EXPANSION PLUGS

- Triple- Split expansion
- With collar or
- With out collar
- Anti rotation fins

For Use in:

- Concrete
- Solid Brick/Block
- Aerated block

### KEW® SUPER UNIVERSAL PLUGS

- Triple- Split expansion
- With collar or
- With out collar
- Anti rotation fins
- Knots behind boards

For Use in:

- Concrete
- Solid Brick/Block
- Hollow Brick / Block
- Aerated block
- Board materials

### KEW® SUPER UNIVERSAL PLUGS

Interlocking action when used in board materials, hollow brick & hollow block

## LOAD CONTROLLED SLEEVE ANCHOR

**Bremick BREMIBOLT™ Anchors** are heavy duty one piece, preassembled, torque controlled, mechanical anchors consisting of a high tensile threaded plow bolt and washer with a hardened cold formed coned end assembled with a heavy gauge carbon steel shear sleeve and nylon compression ring. During setting the cone is drawn into the expansion sleeve which provides a controlled expansion force to provide a lock to the base material through a combination of friction and base material deformation.

Pretension in the installed high tensile anchor is preserved by a pre engineered nylon compression ring seated at the base of the shear sleeve that is designed to crush during the installation process which prevents anchor rotation, eliminates sleeve compression, maintains bolt pretension and high clamping forces. Complies to AS3850.

**Bremick BREMIBOLT™ Anchors** are available with Hexagonal heads, other head styles are available on request.

### APPLICATIONS

Heavy duty torque controlled anchor, for general use in concrete for secure high load applications.

### FEATURES

- Heavy Duty
- High Tensile Carbon Steel components
- Reliable Torque controlled setting
- Follow up expansion
- Immediate loading
- Suitable dynamic loading
- High shear resistance

### ANCILLARY PRODUCTS CLEANING TOOLS

For Brushes, Blow Pumps and Sieves please refer to the Chemical Injection System section of this book.

### SUGGESTED SPECIFICATION

Heavy duty torque controlled anchors shall be preassembled and manufactured from Grade 8.8 high tensile steel components complete with nylon compression ring and shall comply to AS3850. Anchors shall be sourced from Bremick Pty Ltd.

### SETTING INSTRUCTIONS

#### 1: Drill

Drill hole in base material to specified diameter and depth.

#### 2: Clean

Blow out dust and drilling fragments.

#### 3: Insert

Insert anchor into hole and drive until nut and washer are flush with the material surface.

#### 4: Set

Using a wrench or drive socket expand anchor by tightening bolt to specified torque. 3-5 turns or specified torque.

All above Values are Design Values for anchors installed in concrete with anchors installed at characteristic embedment depths, as shown. Recommended Loads have been derived with a Safety factor of 4.  
All Shear Values are Single Shear.

For further performance data, including Characteristic, Working Stress, Limit State Design Values and design data please refer to our Web Site [www.bremick.com.au](http://www.bremick.com.au)

**Bremick Sleeve Anchors** are one piece, preassembled, torque controlled, mechanical anchors consisting of a threaded plow bolt with a cold formed coned end assembled with a pressed carbon steel expansion sleeve. During setting the cone is drawn into the anchor sleeve which provides sufficient expansion force to provide a lock to the base material through a combination of friction and base material deformation. Pretension in the installed anchor is preserved by pre engineered deformations in the sleeve that are designed to crush during the installation process.

**Bremick Sleeve Anchors** are available in all head forms including, Hexagonal, Flush, countersunk, hook and eye bolts. **Bremick Sleeve Anchors** are also available in Stainless steel, zinc plated and Galvanised.

**APPLICATIONS**

Quality, medium duty torque controlled deformation type sleeve anchor, for general use in concrete, solid masonry and stone.

**FEATURES**

- Fast and simple installation
- Ideal for through fastening.
- Reliable force controlled setting
- Follow up expansion
- Immediate loading
- Suitable for over head application
- Available in Zinc Plate, Galvanised and Stainless Steel
- Available in a wide variety of head types.

**ANCILLARY PRODUCTS  
CLEANING TOOLS**

For Brushes and Blow Pumps please refer to the Chemical Injection System section of this book.

**SUGGESTED SPECIFICATION**

**Carbon Steel Sleeve Anchor**  
Carbon steel expansion sleeve anchors shall be preassembled with a .....style head.

All components shall be zinc plated/galvanised and shall be sourced from Bremick Pty Ltd.

**Stainless Steel Sleeve Anchor**  
Stainless steel expansion sleeve anchors shall be manufactured from Stainless Steel 316 and preassembled with a .....style head and shall be sourced from Bremick Pty Ltd.

**SETTING INSTRUCTIONS**

**1: Drill**  
Drill hole in base material to specified diameter and depth. Care should be taken to control hole diameter.

**2: Clean**  
Blow out dust and drilling fragments.

**3: Insert**  
Insert anchor into hole and drive until nut and washer are flush with the material surface.

**4: Set**  
Using a wrench expand anchor by tightening to specified torque.

**HEXAGONAL FLANGE HEAD

## SLEEVE ANCHOR - SUSPENSION

37

**Bremick Suspension Sleeve Anchors** are single unit preassembled torque controlled sleeve anchors that incorporate a medium duty suspension head. The specially designed head being ideal for the attachment of cable ties or Suspension Support wires for suspended ceiling installation.

**Bremick Suspension Sleeve Anchors** are available in lengths of 25mm or 35mm in zinc plate.

### APPLICATIONS

- Suspended ceiling supports
- Cable supports

### FEATURES

- Simple installation
- Fully assembled
- Fully assembled fastener
- Reliable Torque controlled setting
- Follow up expansion
- Can be loaded immediately after installation
- Over head application

### ANCILLARY PRODUCTS CLEANING TOOLS

For Brushes and Blow Pumps please refer to the Chemical Injection System section of this book.

### SUGGESTED SPECIFICATION

#### Carbon Steel Suspension Sleeve Anchors

Suspension anchors shall be manufactured from carbon steel with a preassembled expansion mechanism and pressed steel suspension head.

All components shall be zinc plated and shall be sourced from Bremick Pty Ltd.

### SETTING INSTRUCTIONS

#### 1: Drill

Drill hole in base material to specified diameter and depth.

#### 2: Clean

Blow out dust and drilling fragments

#### 3: Insert

Insert anchor into hole and drive until the head is flush with the material surface.

#### 4: Insert Fastener

Using a wrench expand anchor by tightening head to specified torque.

6.5	M5	25	1.3	1.9	1.5	2.1	1.7	2.4	1.8	2.6	2.1	3.1
		35	2.0	1.9	2.3	2.1	2.6	2.4	2.8	2.6	3.3	3.1

All above Values are Design Values for anchors installed in concrete with anchors installed at characteristic embedment depths, as shown. Recommended Loads have been derived with a Safety factor of 4.  
All Shear Values are Single Shear.

For further performance data, including Characteristic, Working Stress, Limit State Design Values and design data please refer to our Web Site [www.bremick.com.au](http://www.bremick.com.au)

**Bremick Suspension - Tie Wire Sleeve Anchors** are light duty expansion anchors with a one piece deformed shank incorporating a special head for the attachment of supporting tie wires.

## APPLICATIONS

- Suspended ceiling supports
- Cable tie supports

## FEATURES

- High Load Capacity
- Fast and simple installation
- Fully assembled fastener
- Reliable force controlled setting
- Follow up expansion
- Can be loaded immediately after installation
- Over head application

## ANCILLARY PRODUCTS CLEANING TOOLS

For Brushes and Blow Pumps please refer to the Chemical Injection System section of this book.

## SUGGESTED SPECIFICATION

All cable/ceiling supports shall be one piece suspension tie wire anchors manufactured from carbon steel.

All components shall be zinc plated and shall be sourced from Bremick Pty Ltd.

## SETTING INSTRUCTIONS

### 1: Drill

Drill hole in base material to specified diameter and depth.

### 2: Clean

Blow out dust and drilling fragments

### 3: Insert

Insert anchor into hole and drive with a hammer to required depth.

### 4: Insert Fastener

Expansion will take place once the anchor is loaded. Allow for a small displacement when loaded.

**Bremick Through Bolts** are a single unit pre assembled wedge type anchor, consisting of a nut, washer, threaded bolt with a precision formed tapered mandril and a spring steel expansion collar. **Through Bolts** provide torque controlled setting which when tightened draw the tapered mandril into the spring steel collar which generates controlled expansion against the walls of the hole.

**Bremick Through Bolts** are available in Zinc Plate, Galvanised and Stainless Steel 316.

**APPLICATIONS**

Heavy duty torque controlled, deformation type stud bolt anchor specifically developed for through fastening into concrete.

**BENEFITS**

- Fast and simple installation
- Minimum drill hole diameter.
- Drill hole diameter same as anchor diameter
- Ideal for through fastening.
- Supplied with nut and washer
- Reliable force controlled setting
- High loading capacity.
- Follow up expansion with one piece wedge mechanism
- Can be loaded immediately after installation

**ANCILLARY PRODUCTS  
CLEANING TOOLS**

For Brushes and Blow Pumps please refer to the Chemical Injection System section of this book.

**SUGGESTED SPECIFICATION**

**Carbon Steel Through Bolts**

Carbon steel expansion anchors shall be manufactured from Class 4.6 carbon steel with a one piece anchor body and a band style expansion collar. All components shall be zinc plated and shall be sourced from Bremick Pty Ltd.

**Hot Dipped Galvanised Through Bolts**

Carbon steel expansion anchors shall be manufactured from Class 4.6 carbon steel with a one piece anchor body and a band style expansion collar. All components shall be hot dip galvanised and shall be sourced from Bremick Pty Ltd.

**Stainless Steel Through Bolts**

Carbon steel expansion anchors shall be manufactured from 316 stainless steel with a one piece anchor body and a band style expansion collar and shall be sourced from Bremick Pty Ltd.

**SETTING INSTRUCTIONS**

**1: Drill**

Drill hole in base material to specified diameter and depth. Care should be taken to control hole diameter.

**2: Clean**

Blow out dust and drilling fragments.

**3: Insert**

Insert anchor into hole and drive until nut and washer are flush with the material surface.

**4: Set**

Using a wrench expand anchor by tightening nut to specified torque.

All above Values are Design Values for anchors installed in concrete with anchors installed at characteristic embedment depths, as shown. Recommended Loads have been derived with a Safety factor of 4.  
All Shear Values are Single Shear.

For further performance data, including Characteristic, Working Stress, Limit State Design Values and design data please refer to our Web Site [www.bremick.com.au](http://www.bremick.com.au)

**Bremick Drop-In (wedge) Anchors** are single unit, pre assemblies, deformation controlled expansion anchors consisting of an internally threaded shell, a precision formed internal taper and an integral expansion cone . Expansion is achieved by driving the cone with a hammer and proprietary **Setting Tool** forcing the shell against the wall of the hole. Fastening is then achieved by the installation and tightening of a bolt or threaded rod.

**Bremick Drop-In Anchors** are available with parallel shells or lipped shells that ensure flush installation with the concrete base material.

**Bremick Drop-In Anchors** are available in Zinc Plated Carbon Steel and 316 Stainless Steel.

**APPLICATIONS**

Medium Duty internally threaded anchor for shallow embedment applications in concrete and hard natural stone. Commonly used for anchoring threaded rods for the suspension of pipe work and sprinkler supports.

**FEATURES**

- Simple expansion with hammer blows
- Shallow embedment depth reduces clashes with reinforcement steel.
- Can be loaded immediately after installation.
- Versatile internally threaded deformation controlled expansion anchor.
- Can be deep set below concrete surface.
- Can be flush set
- Suitable for use with bolts or threaded rods of any length

**ANCILLARY PRODUCTS  
CLEANING TOOLS**

For further information please refer to the Chemical Injection System section of this book.

**BOLTS**

For Bolts, Set Screws, Socket Screws and Threaded Rod please refer to the Bremick Industrial Products Catalogue.

**SUGGESTED SPECIFICATION**

**Zinc Plated Drop-In Anchors**  
Drop-In anchors shall be a one piece wedge type anchor consisting of an internally threaded sleeve and expansion cone. Anchors shall be manufactured from carbon steel Corrosion

protection shall be provided by zinc electroplating plated, anchors and bolts shall be sourced from Bremick Pty Ltd.

**Stainless Steel Drop-In Anchors**  
Drop-In anchors shall be a one piece wedge type anchor consisting of an internally threaded sleeve and expansion cone. Anchors shall be manufactured from stainless steel 316, anchors and bolts shall be sourced from Bremick Pty Ltd.

**SETTING INSTRUCTIONS**

**1: Drill**  
Drill hole in base material to specified diameter and depth.

**2: Clean**  
Blow out dust and drilling fragments.

**3: Insert**  
Insert anchor into hole and expand anchor with setting tool and hammer.

**4: Set**  
Mount fixture and fasten with bolt or insert threaded rod for hangers.

All above Values are Design Values for anchors installed in concrete with anchors installed at characteristic embedment depths, as shown. Recommended Loads have been derived with a Safety factor of 4.  
All Shear Values are Single Shear.

For further performance data, including Characteristic, Working Stress, Limit State Design Values and design data please refer to our Web Site [www.bremick.com.au](http://www.bremick.com.au)

The **Bremick Shield Anchor** is a torque controlled expansion anchor consisting of an internally threaded tapered mandril pre assembled inside a slotted expansion sleeve. Expansion is achieved by the application of torque which draws the tapered mandril inside the sleeve forcing the sleeve against the wall of the hole. **Bremick Shield Anchors** are particularly suited for use in low strength or brittle base materials such as hollow blocks and hollow core precast panels due to the large bearing surface of the anchor.

**Bremick Shield Anchors** are available in both metric and imperial sizes.

## APPLICATIONS

Medium Duty torque controlled expansion anchor for application in concrete, masonry and stone.

Particularly suitable for application in hollow blocks and hollow cell precast panels.

## BENEFITS

- Simple Installation
- Flush setting
- Removable
- Relatively low expansion stress
- Can be loaded immediately after installation.
- Available in fractional and metric sizes
- Suitable for fastening with bolts and threaded rod of any length.

## ANCILLARY PRODUCTS FOR BOLTS, SET SCREWS AND THREADED ROD

Please refer to the Bremick Industrial Book

## CLEANING TOOLS

Please refer to the Chemical Injection System section of this book.

## SUGGESTED SPECIFICATION

### Zinc Plated Shield Anchors

Expansion anchors shall be pre assembled and consist of a slotted pressed steel expansion sleeve and an internally threaded expansion cone. Corrosion protection shall be provided by electro plated zinc and all anchors shall be sourced from Bremick Pty Ltd.

## SETTING INSTRUCTIONS

### 1: Drill

Drill hole in base material to specified Diameter and depth.

### 2: Clean

Blow out dust and drilling fragments.

### 3: Insert

Insert anchor into hole until flush with surface.

### 4: Set

Insert bolt in to anchor and expand anchor by application of torque via bolt until specified torque is obtained.

The **Bremick Masonry Screw Bolt** is a highly versatile anchor providing the combined performance characteristics of other mechanical anchors and those of chemical anchors with the added benefit of being fully removable. Manufactured from high tensile steel the shank with dual helix threads that self tap into concrete, masonry, stone and timber. The holding power is developed evenly along the entire shank with minimal pretension expansion forces enabling installation at close centres and edge distances.

**APPLICATIONS**

Fully removable medium duty self tapping masonry screw anchor for applications in concrete, masonry, natural stone and wood.

**FEATURES**

- Fast and simple installation
- Tapered point for easy starting
- Removable and reusable.
- Double helix for rapid thread formation
- Good performance in weak and brittle base materials
- Can be set close to free edges
- Can be reset in the same hole.
- Can be loaded immediately after installation.
- Can be through fastened.

**ANCILLARY PRODUCTS  
CLEANING TOOLS**

For Brushes and Blow Pumps please refer to the Chemical Injection System section of this book.

**SUGGESTED SPECIFICATION**

**Zinc Plated Masonry Screw Anchors**

Masonry Screw Anchors shall be a one piece and manufactured from high tensile Class 8.8 carbon steel with a hexagonal head and double helix threaded shank. Corrosion protection shall be provided by zinc electroplating plated and shall be sourced from Bremick Pty Ltd.

**Galvanised Masonry Screw Anchors**

Galvanised Masonry Screw Anchors shall be a one piece and manufactured from high tensile carbon steel with a hexagonal head and double helix threaded shank. Corrosion protection shall be provided by mechanical galvanising and shall be sourced from Bremick Pty Ltd.

**SETTING INSTRUCTIONS**

**1: Drill**

Drill hole to specified diameter and depth. Depth must be embedment plus 2 anchor diameters to accommodate cutting debris.

**2: Clean**

Blow out dust and drilling fragments.

**3: Set**

Insert anchor into hole and screw in using spanners, sockets or an impact wrench. Apply constant forward pressure when driving. Set to specified torque.

**4: Removal**

Use hand tools when removing the anchor. Do not remove with power tools if resetting the anchor.

**BREMIFIX™** is a comprehensive chemical anchoring system providing cost effective solutions for all adhesive fastening applications.

**SPIN CAPSULES**

High performance epoxy acrylate adhesive in a single application glass capsule.

**EPOXY INJECTION**

Solvent free, epoxy injection system with high bond strength even in extreme application conditions.

**STY FREE EASF INJECTION**

NEW Formula: Low odour Epoxy Acrylate Styrene Free cartridge injection system, high loads and can be used in wet conditions. Suitable for use in regular caulking guns.

(Replaces **BREMIFIX™** Styfree Polyester resin)

**POLYESTER INJECTION**

High performance polyester cartridge injection system, where economy is important.

**STUD BOLTS**

Chisel cut anchor rods for use with **BREMIFIX™** Capsules and Flat Cut rods for use with **BREMIFIX™** injection systems.

Suitable  May be suitable depending on application  Not Suitable

The **Bremfix™ Capsule** system consists of a two part glass capsule containing resin grout with quartz aggregate in the outer capsule and di-benzol peroxide hardening agent in the inner capsule.

The **Bremfix™ Capsules** are used in conjunction with the Bremick chisel pointed anchor rods, **Bremfix™ Stud Bolts** which are installed with a rotary hammer drill and rod adapters. **Bremfix™ Capsules** are used for installing anchor rods from M8 to M24mm into solid concrete and masonry materials.

**APPLICATIONS**

High quality heavy duty fastening of Stud Bolts into concrete, and solid masonry.

- High load capacity
- Rapid curing
- Accurate mixing
- No expansion forces in base material
- Small spacing and edge distances
- Assured setting depths
- Hex drive on all Stud Bolts
- Depth indicator on stud

**ANCILLARY PRODUCTS  
CLEANING TOOLS**

For Brushes and Blow Pumps please refer to the Chemical Injection System section of this book.

**SUGGESTED SPECIFICATION**

**Bremfix™ Adhesive Capsule System**

The bonded anchor used shall be Bremfix adhesive capsules and Bremfix™ chisel cut anchor rods. The capsule shall be a clear glass ampule containing epoxy acrylate resin, hardener and quartz aggregate.

Installation shall be in accordance with the manufactures recommendations and all capsules and anchor rods shall be sourced from Bremick Pty Ltd.

**SETTING INSTRUCTIONS**

**1: Drill**

To specified depth and diameter.

**2: Clean**

Brush and blow debris from drilled hole.

**3: Insert**

Insert capsule into drill hole.

**4: Mix Capsule**

Using adapter and rotary hammer drive rod through capsule to embedment depth.

**5: Cure**

Allow adhesive to cure with no disturbance of the fastener. (Gel & cure time chart refers)

**6: Fix**

Mount fixture and tighten to specified torque.

## SPIN CAPSULE

**Bremfix™ Epoxy** is a “one shot” two part Epoxy adhesive cartridge system based on a solvent free Epoxy resin. Ideal as a general purpose thixotropic structural adhesive and anchoring system.

**Bremfix™ Epoxy** has excellent resistance to most chemicals and will bond or repair almost any material. Applied in one single action **Bremfix™ Epoxy** produces a cost effective, tough, chemical resistant fixing in concrete, solid masonry and stone. The high bond strength ensures maximum performance in damp base materials and fastening into smooth faced holes. The controlled curing time simplifies the fastening of deep set, large diameter applications and fastenings made into warm base materials and in tropical climates.

**APPLICATIONS**

High quality heavy duty fastening of Stud Bolts into concrete, and solid masonry.

- Grouting starter bars
- Anchoring into cored holes
- Anchoring in damp environments
- Grouting dowel bars
- Anchoring in tropical environments
- High strength adhesive

**FEATURES**

- Controlled curing
- High strength
- Powerful adhesion
- Suitable for diamond cored holes
- Can be used in damp conditions
- Bonds most materials (excluding rubber & PVC)
- Long shelf life

**ANCILLARY PRODUCTS  
CLEANING TOOLS**

For Brushes and Blow Pumps please refer to the end of this section.

**SUGGESTED SPECIFICATION**

**Bremfix™ Epoxy Injection System**

The bonded anchor used shall be Bremfix Epoxy injection mortar and Bremfix anchor rods. The two part epoxy resin shall be solvent free and shall be dispensed from a one shot cartridge and matching applicator gun. Installation shall be in accordance with the manufactures recommendations and all chemicals and anchor rods shall be sourced from Bremick Pty Ltd.

**SETTING INSTRUCTIONS**

**1: Drill**

To specified depth and diameter.

**2: Clean**

Brush and blow debris from drilled hole. Base material must be clean and dry.

**3: Inject**

Inject mortar working from the bottom of the hole to approximately 1/3rd full.

**NB:** Dispense first 10ml to waste.

**4: Insert Fastener**

Insert rod or bar rotating by hand to expel air.

**5: Cure**

Allow mortar to fully cure with no disturbance of the fastener.

**6: Fix**

Mount fixture and tighten to specified torque.

## MATERIAL PROPERTIES

### ULTIMATE PHYSICAL PROPERTIES

COMPRESSIVE STRENGTH (ASTM 695)	82.48 N/mm <sup>2</sup>
TENSILE STRENGTH (ASTM 638)	28.21 N/mm <sup>2</sup>
FLEXURAL STRENGTH (ASTM 795)	41.64 N/mm <sup>2</sup>
ELASTIC MODULUS	4811.00 N/mm <sup>2</sup>
FLEXURAL MODULUS	4249.00 N/mm <sup>2</sup>
MIXED DENSITY	1.40 g/cm <sup>3</sup>

### STORAGE

Store in a clean dry area at temperatures between 5°C and 25°C.

Do not expose to direct sunlight.

Storage at higher temperatures will reduce shelf life.

**Bremfix™ Styfree - EASF** (epoxy Acrylate styrene free) is a high performance, rapid curing two part chemical anchoring system based on Modified Epoxy Acrylate in Methacrylate Monomers. Applied in one single action, this hybrid resin will produce a cost effective, strong, chemical resistant fastening.

**Bremfix™ Styfree - EASF** is low odour and non flammable resulting in a safe system that has no occupational exposure limits assigned to it. The cartridge has economic 300ml volume and for total convenience can be dispensed using a standard caulkung gun. **Bremfix™ Styfree - EASF** is specifically designed for chemical anchoring as a system with **Bremfix™ Stud Bolts** or threaded rod into concrete, solid masonry and stone, even in wet conditions.

**APPLICATIONS**

High quality heavy duty fastening of Stud Bolts into concrete, and solid masonry.

- Anchoring with Stud bolts
- Hollow blocks with sieves
- Concrete
- Stone
- Masonry
- Aerated concrete

**FEATURES**

- Rapid Curing
- Non Flammable
- High chemical resistance
- Watertight fastening
- Suitable for underwater applications
- Economic
- Used with standard caulking gun

**ANCILLARY PRODUCTS  
CLEANING TOOLS**

For Brushes, Blow Pumps and Sieves please refer to the end of this section.

**SUGGESTED SPECIFICATION**

**Bremfix™ StyFree - EASF Injection System**  
The bonded anchor used shall be Bremfix™ Sty Free - EASF injection mortar and Bremfix™ anchor rods. The 2 part Epoxy Acrylate resin shall be free form Styrene Monomers. Installation shall be in accordance with the manufactures recommendations and all chemicals and anchor rods shall be sourced form Bremick Fasteners Pty Ltd.

**SETTING INSTRUCTIONS**

**1: Drill**

To specified depth and diameter.

**2: Clean**

Brush and blow debris from drilled hole. For underwater use brush & flush with clean water.

**3: Inject**

Inject mortar working from the bottom of the hole to approximately 1/3rd full.

**NB:** Dispense first 10ml to waste.

**4: Insert Fastener**

Insert rod or bar rotating by hand to expel air.

**5: Cure**

Allow mortar to fully cure with no disturbance of the fastener.

**6: Fix**

Mount fixture and tighten to specified torque.

**BREMIFIX™ STUD BOLTS OR THREADED ROD WITH PLASTIC SIEVES**

**Zinc plated, galvanised, stainless steel 304 or stainless steel 316**

The **Bremfix Chemical Injection System** for masonry has been developed to enable reliable chemical fastenings in all common forms of masonry, solid ceramic brick, cellular brick, hollow blocks, concrete block and silicate bricks using a mesh sieve, chemical injection mortar and a threaded insert. Fastening is achieved by inserting a specially designed **Bremfix™ Plastic Sieve** (polyethylene) filled with **Bremfix™ Styfree - EASF** into a predrilled and cleaned hole in the base material. Following the placement of the pre-filled sieve a **Bremfix™ Stud Bolt**, or threaded rod, is inserted into the installed sieve causing extrusion of the chemical mortar through the sieve mesh into voids and fissures in the masonry base material. When cured fastening is achieved through a combination of chemical bonding (adhesion) and mechanical interlock (keying).

The Bremfix Injection system for masonry limits expansion forces in the base material permitting reliable fastenings in brittle and hollow masonry where other types of fasteners can not be used. **Bremfix™ Plastic Sieves** are available in a variety of sizes and can be used with **Bremfix™ Stud Bolts** or threaded rod.

**APPLICATIONS**

Fastening into ceramic and concrete masonry elements.

- Ceramic Brick
- Silicate Brick
- Cellular Brick
- Hollow Block

**FEATURES**

- Complete System
- Reliable performance
- Simple
- Fast cure
- High load
- No pre expansion forces

**PRODUCT SYSTEM**

- Bremfix™ Styfree - EASF injection mortar.
- Bremfix™ Injection gun
- Bremfix™ Plastic Sieves
- Bremfix™ Stud Bolts

**ANCILLARY PRODUCTS  
CLEANING TOOLS**

Threaded rods, nuts & washers please refer to the Bremick Industrial catalogue.

**Cleaning Tools**

For Brushes and Blow Pumps please refer to the end of this section.

**SUGGESTED SPECIFICATION**

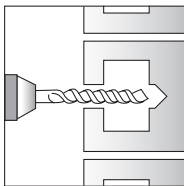

All fastenings into masonry walls shall be installed using preparatory chemical injection system that incorporates fine meshed sieves incorporating an integral centring devise.

Threaded inserts shall be of grade .....

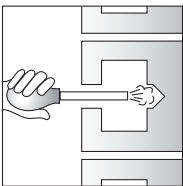

All elements of the fastening system shall be from Bremick Pty Ltd.

**SETTING INSTRUCTIONS**

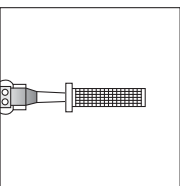

**1: Drill**

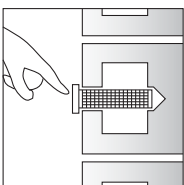

**2: Clean**

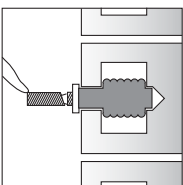

**3: Fill Sieve**

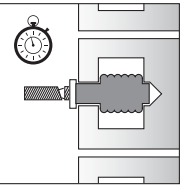

**4: Insert Sieve**

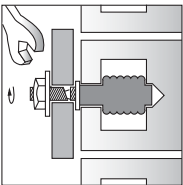

**5: Insert Stud Bolt**

**6: Cure**

**7: Fix**

## MATERIAL PROPERTIES

### ULTIMATE PHYSICAL PROPERTIES

COMPRESSIVE STRENGTH	(ASTM 695)	62.7 N/mm <sup>2</sup>
TENSILE STRENGTH	(ASTM 638)	12.85 N/mm <sup>2</sup>
FLEXURAL STRENGTH	(ASTM 795)	23.88 N/mm <sup>2</sup>
ELASTIC MODULUS		6860.33 N/mm <sup>2</sup>
FLEXURAL MODULUS		3250.33 N/mm <sup>2</sup>
MIXED DENSITY		1.65 g/cm <sup>3</sup>

### STORAGE

Store in a clean dry area at temperatures between 5°C and 25°C.

Do not expose to direct sunlight.

Storage at higher temperatures will reduce shelf life.

**Bremfix™ Poly** is a high performance, rapid curing, two part chemical anchoring system based on unsaturated Polyester resin in Styrene.

Applied in one single action this general purpose resin will produce a cost effective, strong, chemical resistant fixing. Suitable for fastening with **Bremfix™ Stud Bolts**, threaded rod or reinforcing bars into concrete, solid masonry or stone.

## APPLICATIONS

High quality, economic fastening of Stud Bolts and threaded rods into concrete, and solid masonry.

- Anchoring with Stud Bolts
- Hollow blocks with sieves
- Concrete
- Stone
- Masonry
- Aerated concrete

## FEATURES

- Rapid curing
- High strength
- Economic
- Reliable mixing
- 410ml Cartridge

## ANCILLARY PRODUCTS CLEANING TOOLS

For Brushes, Blow Pumps and Sieves please refer to the end of this section

## SUGGESTED SPECIFICATION

### Bremfix™ Poly Injection System

The bonded anchor used shall be Bremfix™ Poly injection mortar and Bremfix™ anchor rods. The two part polyester resin shall be dispensed from a one shot cartridge and matching applicator gun. Installation shall be in accordance with the manufactures recommendations and all chemicals and anchor rods shall be sourced from Bremick Pty Ltd.

## SETTING INSTRUCTIONS

### 1: Drill

To specified depth and diameter.

### 2: Clean

Brush and blow debris from drilled hole. Base material must be clean and dry.

### 3: Inject

Inject mortar working from the bottom of the hole to approximately 1/3rd full.

**NB:** Dispense first 10ml to waste.

### 4: Insert Fastener

Insert rod or bar rotating by hand to expel air.

### 5: Cure

Allow mortar to fully cure with no disturbance of the fastener.

### 6: Fix

Mount fixture and tighten to specified torque.

## NYLON NAIL-IN ANCHOR

83

**Bremick Nylon Nail-In Anchors** are friction type anchors that provide a highly economical fastening solution for light duty fastening needs. Nail-in anchors consist of a hollow nylon sleeve with longitudinal expansion slots pre assembled with a tapered serrated drive pin. The pin is driven into the sleeve and a friction grip is developed against the wall of the hole by the resulting anchor expansion.

**Bremick Nylon Nail-In Anchors** are available with head forms to suit most applications including: countersunk, mushroom and round heads.

### APPLICATIONS

Fully assembled light duty plastic anchor for application in concrete, masonry and stone.

### BENEFITS

- Quick and simple installation
- Setting by hammer.
- Removable with screw driver
- Through fastening
- Available in a variety of head types

### ANCILLARY PRODUCTS CLEANING TOOLS

For Brushes and Blow Pumps please refer to the Chemical Injection System section of this book.

### SUGGESTED SPECIFICATION

#### Nylon Nail In Anchors

The anchors used shall be nylon nail in anchors consisting of a nylon friction sleeve preassembled with a zinc plated carbon steel drive pin. Installation shall be in accordance with the manufactures recommendations and all anchors shall be sourced from Bremick Pty Ltd.

### SETTING INSTRUCTIONS

#### 1: Drill

Drill hole in base material to specified diameter and depth.

#### 2: Clean

Blow out dust and drilling fragments. Alternatively drill hole 5mm deeper.

#### 3: Insert

Insert nylon anchor into hole until the head is flush with the fixture.

#### 4: Set

Set anchor by driving screw pin with hammer blows. Additional tightening or adjustment may be achieved with a screw driver.

All above Values are Design Values for anchors installed in concrete and masonry with anchors installed at characteristic embedment depths, as shown and are valid for products supplied by Bremick Pty only.  
Recommended Loads have been derived with a Safety factor of 4.  
All Shear Values are Single Shear.

For further performance data, including Characteristic, Working Stress, Limit State Design Values and design data please refer to our Web Site [www.bremick.com.au](http://www.bremick.com.au)

**Bremick Heavy Duty Nylon Anchors** are high performance friction type anchors that provide a highly economical fastening solution for light duty fastening needs.

Heavy duty nylon anchors consist of a hollow nylon sleeve with longitudinal expansion slots pre assembled with a tapered serrated drive pin. The pin is driven into the sleeve and a friction grip is developed against the wall of the hole by the resulting anchor expansion.

## APPLICATIONS

Fully assembled high quality plastic anchor for application in concrete, masonry and stone.

## BENEFITS

- Phillips 2 Drive Head
- Quick and simple installation
- Setting by hammer or screw driver
- Removable with screw driver
- Through fastening
- Higher loading due to enlarged head diameter
- The insulation properties of the nylon sleeve protect against bi-metallic corrosion

## ANCILLARY PRODUCTS CLEANING TOOLS

For Brushes and Blow Pumps please refer to the Chemical Injection System section of this book.

## SUGGESTED SPECIFICATION

### Heavy Duty Nylon Nail In Anchors

The anchors used shall be nylon nail in anchors consisting of a nylon friction sleeve with longitudinal expansion slots preassembled with a tapered, zinc plated, serrated drive pin with a philips cross recessed head. Installation shall be in accordance with the manufactures recommendations and all anchors shall be sourced form Bremick Pty Ltd.

## SETTING INSTRUCTIONS

### 1: Drill

Drill hole in base material to specified diameter and depth.

### 2: Clean

Blow out dust and drilling fragments. Alternatively drill hole 5mm deeper.

### 3: Insert

Insert nylon anchor into hole until the head is flush with the fixture.

### 4: Set

Set anchor by driving screw pin with hammer blows. Additional tightening or adjustment may be achieved with a screw driver.

# HEAVY DUTY NYLON ANCHOR

**Stainless Steel  
316/A4**

**KEW® - Heavy Duty Nylon Anchors** are high performance friction type anchors that provide an economical and reliable fastening solution for light duty fastening needs. KEW® Heavy Duty Nylon Anchors consist of a hollow nylon sleeve with longitudinal expansion slots pre assembled with a stainless steel threaded screw pin. The pin is driven into the sleeve and a friction grip is developed against the wall of the hole.

Nylon sleeve with Stainless Steel A4/316 Screw Pin.

## APPLICATIONS

Fully assembled high quality nylon sleeve with stainless steel 316/A4 drive pin for light duty fastening uses in concrete, masonry, brick, block and Hebel type materials.

Suitable for use in corrosive environments

- Metal flashings
- Skirting boards
- Metal brackets
- Timber supports

## ANCILLARY PRODUCTS

For cleaning brushes and blow pumps please refer to the chemical injection section of this book.

## SUGGESTED SPECIFICATION

### KEW® Heavy Duty Nylon Anchors

The anchors used shall be Nylon Nail In anchors with a stainless steel 316 / A4 pin. Installation shall be in accordance with the manufacturers recommendations and the anchors shall be sourced from Bremick Fasteners Pty Ltd.

## SETTING INSTRUCTIONS

### 1: Drill & Clean

Drill hole in base material to specified diameter & depth.  
Blow drill debris clear of hole.

### 2: Insert & Set

Insert anchor into hole until the head is flush with the fixture.  
Drive pin into sleeve with hammer blows.

### 3: Adjust & finish

Additional adjustment or removal may be achieved with a screw driver.

Recommended Loads have been derived with a Safety factor of 4.

All Shear Values are Single Shear.

**Bremick Metal Pin Anchors** are vandal proof deformation controlled anchors consisting of a large flanged, hollow, longitudinally slotted Zinc Alloy expansion sleeve pre assembled with a tapered steel drive pin. Expansion is created by driving the pin which causes the sleeve to deform and create expansion force against the base material. The large flanged head provides high pull over resistance and is ideally suited for tamper proof applications.

## APPLICATIONS

Non removable light duty fastenings to concrete, blocks, brick and stone where rapid installation and where high shear loads are required. Not recommended for overhead application.

## BENEFITS

- Easy installation
- Low head profile
- Secure displacement controlled expansion.
- Through fastening
- Vandal proof fastening (not removable)
- Full metal design provides higher loading power than nylon nail in anchors.

## ANCILLARY PRODUCTS CLEANING TOOLS

For Brushes and Blow Pumps please refer to the Chemical Injection System section of this book.

## SUGGESTED SPECIFICATION

### Metal Pin Anchors

The tamper resistant expansion anchors used shall be preassembled metal pin anchors with a large mushroom head with an integral slotted expansion sleeve made from corrosion resistant zinc alloy. Installation shall be in accordance with the manufactures recommendations and all anchors shall be sourced form Bremick Pty Ltd.

## SETTING INSTRUCTIONS

### 1: Drill

Drill hole in base material to specified Diameter, depth shall be 5mm deeper than required embedment depth.

### 2: Clean

Blow out dust and drilling fragments.

### 3: Insert

Mount fixture and Insert anchor through Fixture into hole.

### 4: Set

Set anchor by hammering anchor pin until flush set.

**KEW® Universal Frame Anchors** are specifically designed for the fixing of timber frames to concrete, masonry and aerated blocks. KEW® Frame Anchors consist of an engineered nylon sleeve with longitudinal expansion slots, radial grooving for high grip, extended expansion area and integral anti rotation lugs which is pre assembled with a heavy duty 7mm diameter screw. Expansion is created by driving the tapered screw into the sleeve resulting in the generation of controlled expansion forces across the full length of the sleeve and the base material.

**KEW® Universal Frame Anchors** are available zinc plated, galvanised or 316 Stainless steel with either Hexagonal or Torx drive Countersunk Heads for use where a flush finish is required. *KEW® Frame Anchors are engineered and manufactured by KEW® GmbH Germany and are exclusively available from Bremick Fasteners.*

## APPLICATIONS

Through fastening of timber frames or metal brackets to all types of masonry, aerated block, concrete, solid brick and hollow brick.

Fastening of gates, door frames, windows, battens, timber, metal brackets, wall cladding and insulation panels (with KEW® Universal Insulation Discs).

## FEATURES

- Triple-Split Expansion
- Extended Expansion zone
- Through fastening
- Anti rotation fins

## ANCILLARY PRODUCTS CLEANING TOOLS

For Brushes and Blow Pumps please to Bremfix™ Section off this book. See also Insulation Discs.

## SUGGESTED SPECIFICATION

### KEW® Universal Frame Anchors

The preassembled expansion anchors used shall be KEW® Nylon Frame Anchors consisting of a longitudinally slotted nylon expansion sleeve complete with a zinc plated heavy duty drive screw. Installation shall be in accordance with the manufactures recommendations and all anchors shall be sourced from Bremick Pty Ltd.

## SETTING INSTRUCTIONS

### 1: Drill

Drill hole in base material to specified diameter, depth shall be 5mm deeper than required embedment depth.

### 2: Insert

Mount fixture and insert anchor through fixture into hole.

### 3: Set

Set anchor by tightening with a socket or screw driver.

### 4: Finish

Recommended Loads have been derived with a Safety factor of 4.

All Shear Values are Single Shear.

**Bremick Metal Frame Anchors** are specifically designed for the fixing of timber frames to concrete, masonry and aerated blocks and provide parallel sleeve expansion that grips both the frame and the base material facilitating frame adjustment without the need of packers and shims. Frame Anchors consist of an engineered steel sleeve with a full length longitudinal expansion slot and a preformed taper at the sleeve head, a threaded steel bolt with a tapered head and a threaded expansion cone assembled at the foot of the anchor. Parallel sleeve expansion is achieved when tightened by the dual action of the expansion cones at both ends of the anchor which produces equal friction grip to the base material and the fastened frame.

## APPLICATIONS

Fastening timber frames to concrete, masonry and aerated block work where a high degree of adjustment is required.

## FEATURES

- High clamping forces
- Permits frame adjustment
- No frame pack required
- Through fastening
- Suitable for Stand off application
- Removable

## ANCILLARY PRODUCTS CLEANING TOOLS

For Brushes and Blow Pumps please refer to Section 1 of this publication.

## SUGGESTED SPECIFICATION

### Metal Frame Anchors

The preassembled expansion anchors used shall be preassembled metal frame anchors consisting of a full length longitudinally slotted carbon steel expansion sleeve complete with a zinc plated heavy duty drive bolt and expansion cone. Installation shall be in accordance with the manufactures recommendations and all anchors shall be sourced from Bremick Pty Ltd.

## SETTING INSTRUCTIONS

### 1: Drill

Drill hole in base material to specified Diameter, depth shall be 5mm deeper than required embedment depth.

### 2: Clean

Blow out dust and drilling fragments.

### 3: Insert

Mount fixture and Insert anchor through fixture into hole. Position fixture to desired location.

### 4: Set

Set anchor by tightening with a socket or screw driver.

All above Values are Design Values for anchors installed in concrete and masonry with anchors installed at characteristic embedment depths, as shown and are valid for products supplied by Bremick Pty only.

Recommended Loads have been derived with a Safety factor of 4.

All Shear Values are Single Shear.

For further performance data, including Characteristic, Working Stress, Limit State Design Values and design data please refer to our Web Site [www.bremick.com.au](http://www.bremick.com.au)

**KEW® Universal Insulation Disks** provide an innovative and highly versatile solution for securely fastening a wide variety of insulation materials to any base material. The pre-formed anchor holes in the KEW® Universal Insulation Disk permits installation with most fasteners including, frame anchors, nail in anchors, hammer screws and self drilling screws with diameters between 3mm and 10mm.

The unique geometry and large diameter KEW® Insulation Disk provides even holding pressure to ridged or soft insulation materials and can also be used to fasten membranes, foils and mesh fabrics.

A neat finish and thermal break is provided by placement of the end cap provided.

*KEW® Universal Insulation Disks are engineered and manufactured by KEW® GmbH Germany and are exclusively available from Bremick Fasteners.*

## APPLICATIONS

Used together with masonry anchors or self drilling screws to fasten;

- Thermal Insulation
- Acoustic Insulation
- Membrane sheeting
- Foils
- Mesh fabrics

## ANCILLARY PRODUCTS

- KEW® Frame Anchors
- Bremick Heavy Duty Nylon Anchors
- Bremick Stainless Self Drilling Screws Gauges 6g-14g.

## CLEANING TOOLS

Please refer to Bremfix™ Section 1 of this Publication.

## SUGGESTED SPECIFICATION

### KEW® Universal Insulation Disks

All insulation panels shall be secured with KEW® Universal Insulation Discs and KEW® 10mm diameter Universal Frame Anchors. Installation shall be in accordance with the manufactures recommendations and all anchors shall be sourced from Bremick Pty Ltd.

## SETTING INSTRUCTIONS

### Fastening to Concrete & Masonry

#### 1: Drill

Drill hole through insulation and to recommended depth in base material. Brush & blow hole.

#### 2: Insert

Insert anchor through pre-formed hole in insulation disk, then inert anchor into drilled hole.

#### 3: Set

Set anchor in accordance with anchor setting instructions.

#### 4: Finish

### Fastening to Timber

#### 1: Insert

Insert self drilling screw through pre-formed hole in insulation disk, and push into insulation.

#### 2: Tighten

Drive self drilling screw into base material until screw head is tight & flush with insulation disc..

#### 3: Finish

**KEW® UNIVERSAL INSULATION DISK  
PLASTIC 84MM DIAMETER DISC**

Outside Diameter (mm)	Std Pack	Product Code
84	200	KEWUDS84000

**KEW® Hammer Fix Insulation Fastener** is a preassembled fastener system consisting of a plastic expansion shank with an integral 62mm diameter retaining disc with a steel expansion nail complete with a colour coded retaining head. Setting of the anchor is achieved by driving the steel pin into the expansion sleeve. The plastic locking mechanism on the nail head provides security and addition thermal insulation. The heavily textured face on the retaining disc ensures bonding of plaster and render where rendering is applied. The large diameter retaining disc provides even holding pressure to ridged insulation materials and especially suitable for composite systems where render or plaster overlays are applied.

Colour coded heads facilitate simple inspection.

*KEW® Hammer Fix Insulation Fasteners are engineered and manufactured by KEW® GmbH Germany and are exclusively available from Bremick Fasteners.*

## APPLICATIONS

Secure fastening of composite thermal insulation systems to concrete, natural stone, solid/hollow brick and aerated block.

- Thermal Insulation
- Acoustic Insulation

## FEATURES

- Colour coded
- Bonding for Render/plaster overlays
- Full Thermal insulation
- ETAG 004 approved.

## ANCILLARY PRODUCTS CLEANING TOOLS

Please refer to Bremfix™ Section 1 of this Publication.

## SUGGESTED SPECIFICATION

### KEW® Hammer Fix Insulation Fastener

All insulation panels shall be secured with KEW® Hammer Fix Insulation Fasteners. Installation shall be in accordance with the manufactures recommendations and all anchors shall be sourced from Bremick Pty Ltd.

## SETTING INSTRUCTIONS

### Fastening to Concrete & Masonry

#### 1: Drill

Drill hole through insulation and to recommended depth in base material. Brush & blow hole.

#### 2: Clean Hole

Brush & blow hole to remove drilling debris.

#### 3: Insert & Set

Insert anchor into drilled hole. When fully inserted hammer the expansion pin into the sleeve until the head of the drive pin locks into the sleeve.

#### 4: Finish

**KEW® METAL Insulation Fastener** is a one piece fastener system consisting of a metal dowel pin with an integral 35mm diameter metal retaining disc. Setting of the anchor is achieved by simply driving the fastener into the pre drilled hole and a positive friction hold is developed by spring expansion of the anchor shaft. The 35mm diameter retaining disc provides even holding pressure to ridged insulation materials, for soft insulation and mineral wool insulation the KEW® Metal Insulation Fastener can be used in conjunction with the 80mm diameter MDSB disc.

*KEW® Hammer Fix Insulation Fasteners are engineered and manufactured by KEW® GmbH Germany and are exclusively available from Bremick Fasteners.*

**APPLICATIONS**

Secure fastening of composite thermal insulation systems to concrete, natural stone, solid and hollow brick.

- Ridged insulation
  - Polystyrene
  - PU Foam Panels
- Soft insulation with Disc
  - Glass Wool
  - Rock wool

**FEATURES**

- Fire Rated (120 min. to DIN 4102)
- Galvanized Steel
- Stainless Steel

**ANCILLARY PRODUCTS  
CLEANING TOOLS**

Please refer to Bremfix™ Section of this Publication.

**SUGGESTED SPECIFICATION**

**KEW® Metal Insulation Fastener**

All insulation panels shall be secured with KEW® Metal Insulation Fasteners. All insulation fasteners are to be fire rated to 120 minutes, shall be installed in accordance with the manufactures recommendations and all anchors shall be sourced from Bremick Pty Ltd.

**SETTING INSTRUCTIONS**

**Fastening Ridged Insulation**

**1: Drill**

Drill hole through insulation and to recommended depth in base material. Brush & blow hole.

**2: Insert & Set**

Insert anchor into drilled hole and set by hammering until flush with the insulation material.

**3: Finish**

**Fastening Soft Insulation**

**1b: Insert & Set**

Secure 80mm disc on to shank, insert anchor into drilled hole and set by hammering until flush with the insulation material.

**Push-Through Plug**

**Plug with collar**

**KEW® Super Expansion Plugs** provide a reliable fastening solution for a variety of light duty fastening applications in to concrete and solid masonry. KEW® Super Expansion Plugs consist of a high quality nylon sleeve with the unique **KEW® “ Triple-Split Design”** giving a three way expansion mechanism for increased friction and high loads. KEW® Super Expansion Plugs are to be used in conjunction with **Bremick screws** or in the case of larger plug sizes **Bremick Coach Screws**. KEW® Super Expansion Plugs are available in both **“Push Through”** rim less or **“Collared”** with a retaining collar for setting flush to the surface of the base material.

*KEW® Super Expansion Plugs are engineered and manufactured by KEW® GmbH Germany and are exclusively available from Bremick Fasteners.*

**APPLICATIONS**

High quality plastic anchor for light duty applications in all types of concrete, solid masonry and aerated blocks. Used in conjunction with Bremick timber screws or coach screws. (Limited suitability for hollow materials)

**FEATURES**

- Triple-Split expansion.
- Anti rotation fins
- Reliable expansion
- Through fastening
- Economic & fast

**ANCILLARY PRODUCTS**

- Bremick Stainless steel self tapping screws Gauges 5-12.
- Bremick Chip board screws gauges 8-10.
- Bremick Coach Screws.

**CLEANING TOOLS**

Please refer to Bremfix™ Section 1 of this Publication.

**SUGGESTED SPECIFICATION**

**KEW® Super Expansion Plugs**

The anchors used shall be nylon wall plugs that are to be used in conjunction with ..... Self drilling screws. The wall plug shall consist of a one piece nylon plug with longitudinal expansion slots and radial friction grooves. Installation shall be in accordance with the manufactures recommendations and all anchors shall be sourced from Bremick Pty Ltd.

**SETTING INSTRUCTIONS**

**1: Drill**

Drill hole in base material to specified diameter and depth.

**1b: Clean**

Blow out dust and drilling fragments. Alternatively drill hole 5mm deeper.

**2: Insert**

Insert wall plug into hole until flush with surface.

**3: Set**

Mount fixture and Fasten by driving the Bremick screw firmly into the wall plug until flush setting.

**4: Finish**

**APPROVALS**

**Push-Through  
Universal Plug**

**Universal Plug  
with collar**

**KEW® Super Expansion Plugs** provide a highly versatile and reliable fastening solution for light duty fastening applications in most materials, including boards.. KEW® Super Universal Plugs consist of a high quality nylon sleeve with the unique **KEW® “ Triple-Split Design”** giving a three way expansion mechanism for increased friction and high loads. When used in hollow materials and boards KEW® Super Universal Plugs “knot” behind the board to provide a positive “Key Lock”. KEW® Super Universal Plugs are to be used in conjunction with **Bremick screws** or in the case of larger plug sizes **Bremick Coach Screws**. KEW® Super Universal Plugs are available in both “**Push Through**” rim less or “**Collared**” with a retaining collar for setting flush to the surface of the base material.

*KEW® Super Universal Plugs are engineered and manufactured by KEW® GmbH Germany and are exclusively available from Bremick Fasteners.*

## APPLICATIONS

Highly versatile anchor for light duty applications in concrete, masonry, aerated block, boards and plasterboard.

## FEATURES

- Highly versatile
- Triple-Split Expansion
- “Knots” behind boards
- Economic and fast

## ANCILLARY PRODUCTS

- Bremick Stainless steel self tapping screws Gauges 5–12.
- Bremick Chip board screws gauges 8-10.
- Bremick Coach Screws.

## CLEANING TOOLS

Please refer to Bremfix™ Section 1 of this Publication.

## SUGGESTED SPECIFICATION

### KEW® Super Universal Plugs

The anchors used shall be Universal wall plugs that are to be used in conjunction with ..... Self drilling screws. The Universal plug shall consist of a one piece nylon plug with longitudinal friction grooves. Installation shall be in accordance with the manufactures recommendations and all anchors shall be sourced from Bremick Pty Ltd.

## SETTING INSTRUCTIONS

### 1: Drill

Drill hole in base material to specified diameter and depth.

### 1b: Clean

Blow out dust and drilling fragments. Alternatively drill hole 5mm deeper.

### 2: Insert

Insert wall plug into hole until flush with surface.

### 3: Set

Mount fixture and Fasten by driving the Bremick screw firmly into the wall plug until flush setting.

### 4: Finish

When used in boards, plasterboard and hollow materials the KEW® Super Expansion Plug “knots” to form a positive key.

14	10.0 - 12.0	24 - 28g	75	90	75	113	N/A	14	10	N/A

### SCREW LENGTH SELECTION

The minimum screw length required is the sum of the following:

**PLUG LENGTH** **L**

Plus

**RENDER, TILE DEPTH**

Plus

**FIXTURE THICKNESS** **t<sub>fix</sub>**

Plus

**1 x SCREW DIAMETER** **D**

**Equals Minimum Screw Length** **LS**

All above Values are Design Values in concrete and masonry with anchors installed at characteristic embedment depths, as shown and are valid for products supplied by Bremick Pty only.

Recommended Loads have been derived with a Safety factor of 4.

All Shear Values are Single Shear.

**Bremplug™ Nylon Wall Plugs** provide a cost effective fastening solution for a variety of light duty fastening applications in to concrete and masonry.

**Bremplug™ Nylon Wall Plugs** are manufactured from high quality nylon and consist of a nylon sleeve with longitudinal expansion slots, radial grooving for enhanced friction hold and integral anti spin lugs.

**Bremplug™ Nylon Wall Plugs** are to be used with **Bremick 8 and 10g timber screws**. Expansion is achieved by driving the timber screw in to the **Bremplug™** which expands the sleeve generating controlled friction grip between the sleeve and the base material.

**APPLICATIONS**

Versatile, high quality plastic anchor for light duty applications in concrete, masonry and stone and light weight blocks. To be used in conjunction with Bremick timber screws.

**FEATURES**

- Simple installation
- Good resistance to turning when setting
- Removable
- Through fastening
- Economic

**ANCILLARY PRODUCTS  
SCREWS**

Stainless steel self tapping Gauges 5–12  
*(Bremick Stainless steel book refers)*  
Chip board screws gauges 8-10  
For all other head configurations see  
*Bremick Screws & Rivets Product Catalogue.*

**CLEANING TOOLS**

Please refer to the Chemical Injection System section of this book.

**SUGGESTED SPECIFICATION**

**Nylon Wall Plugs**

The anchors used shall be nylon wall plugs that are to be used in conjunction with ..... Self drilling screws. The wall plug shall consist of a one piece nylon plug with longitudinal expansion slots and radial friction grooves. Installation shall be in accordance with the manufactures recommendations and all anchors shall be sourced from Bremick Pty Ltd.

**SETTING INSTRUCTIONS**

**1: Drill**

Drill hole in base material to specified diameter and depth.

**2: Clean**

Blow out dust and drilling fragments. Alternatively drill hole 5mm deeper.

**3: Insert**

Insert wall plug into hole until flush with surface.

**4: Set**

Mount fixture and Fasten by driving the Bremick screw firmly into the wall plug until flush setting.

**Bremplug™ PVC Wall Plugs** provide a highly cost effective fastening solution for a variety of light duty fastening applications in to concrete and masonry. **Bremplug™ PVC Wall Plugs** are manufactured from PVC and consist of a PVC sleeve with longitudinal grooving for enhanced friction hold. **Bremplug™ PVC Wall Plugs** are to be used with Bremick 8 and 10g timber screws. Expansion is achieved by driving the timber screw in to the **Bremplug™** which expands the sleeve generating controlled friction grip between the sleeve and the base material.

## APPLICATIONS

Versatile and economical anchor for light duty applications in concrete, masonry and stone to be used in conjunction with Bremick chipboard screws.

## FEATURES

- Simple installation
- Versatile
- Removable
- Through fastening

## ANCILLARY PRODUCTS SCREWS

Stainless steel self tapping Gauges 4–14  
*(Bremick Stainless steel book refers)*  
 Chip board screws gauges 8-10  
 See *Bremick Screws and Rivets Product Catalogue*.

## CLEANING TOOLS

Please refer to the Chemical Injection System section of this book.

## SUGGESTED SPECIFICATION

### PVC Wall Plugs

The anchors used shall be PVC wall plugs that are to be used in conjunction with ..... Self drilling screws. The wall plug shall consist of a one piece nylon plug with longitudinal friction grooves. Installation shall be in accordance with the manufactures recommendations and all anchors shall be sourced form Bremick Pty Ltd.

## SETTING INSTRUCTIONS

### 1: Drill

Drill hole in base material to specified diameter and depth.

### 2: Clean

Blow out dust and drilling fragments. Alternatively drill hole 5mm deeper.

### 3: Insert

Insert wall plug into hole until flush with surface.

### 4: Set

Mount fixture and Fasten by driving the Bremick screw firmly into the wall plug until flush setting.

All above Values are Design Values for anchors installed in concrete and masonry with anchors installed at characteristic embedment depths, as shown and are valid for products supplied by Bremick Pty only.  
 Recommended Loads have been derived with a Safety factor of 4.  
 All Shear Values are Single Shear.

**Bremick Cavity Wall Anchor** is a steel fastener for secure fastening into hollow blocks, cavity wall and plaster boards up to 23mm thick and can be set using a screw driver or a preparatory **Setting Tool**. The **Cavity Wall Anchor** is a two piece, preassembled unit consisting of a fully threaded bolt inserted into a collapsible steel sleeve threaded at one end and with a broad serrated flange head that provides a flush firm seating. Once inserted the sleeve is collapsed by the application of torque with a screw driver or by drawing the screw with a **Setting Tool**. The fixture is secured behind the base material by the collapsed sleeve resulting in a secure interlocking fastener.

**APPLICATIONS**

Light duty fastenings to drywall panels, plaster board, timber boards and hollow blocks.

**FEATURES**

- Fully assembled fastening
- Fast installation
- Maximum holding power in thin boards
- Secure force controlled expansion
- Through fastening
- Flush setting with low profile screw head

**ANCILLARY PRODUCTS  
SETTING TOOL**

For further information refer to the relevant section of this book.

**SUGGESTED SPECIFICATION**

**Cavity Wall Anchors**

The anchors used shall be cavity wall anchors that are to be installed by means of a proprietary setting tool. The cavity wall anchors shall consist of a one piece, zinc plated, carbon steel anchor consisting of a collapsible expansion sleeve and a fully threaded bolt. Installation shall be in accordance with the manufactures recommendations and all anchors shall be sourced from Bremick Pty Ltd.

**SETTING INSTRUCTIONS**

**1: Drill**

Drill 6.5 mm Diameter hole through base material.

**2: Insert**

Insert anchor in to predrilled hole and push into base material to engage teeth.

**3: Set**

Set anchor with a screw driver or setting tool to expand locking mechanism.

**4: Fasten**

Remove screw from anchor, mount fixture, reinsert screw into fastener, tighten with screw driver.

The **Bremick Plaster Board Plug** is a one piece, self drilling fastener for making fast and secure fixings into plasterboard materials. Manufactured from corrosion resistant Zinc Alloy for higher loads or high quality nylon where lighter load capacity is acceptable. The **Bremick Plaster Board Plug** features an extended drill point for ease of application, special threads for secure holding power and a broad low profile head to ensure clean surface finish.

Widely used for interior finishing, curtain rails and light duty household fastening and is especially suitable for temporary fixtures as the fastener is fully removable.

**APPLICATIONS**

Light duty fastenings to drywall panels, plaster board, and gypsum boards.

**FEATURES**

- 3 cutting teeth for speed and to maintain centering
- Short length to assist setting.
- Self drilling design that reduces the risk of board tears
- Same drive head for setting of plaster board plug and screw
- Removable
- Fast and clean with good holding power

**ANCILLARY PRODUCTS**

Stainless steel self tapping screw Gauges 6-8g (*Bremick Stainless steel book refers*)  
 Chipboard screws gauges 6-8g and for all other head configurations see *Bremick Screws and Rivets Product Catalogue*

**SUGGESTED SPECIFICATION**

**Plasterboard Plugs**

Anchors used in gypsum wall boards shall be single piece self drilling type with a flush finish, low profile head and are to be used in conjunction with self drilling screws. The metal anchor shell shall be manufactured from corrosion resistant zinc alloy. Installation shall be in accordance with the manufactures recommendations and all anchors shall be sourced from Bremick Pty Ltd.

**SETTING INSTRUCTIONS**

**1: Drill**

Push the teeth of the plaster board plug into the drywall panel.

**2: Set**

Using a Phillips #2 screw driver set the plaster board plug until it sits flush with the surface of the board.

**3: Fasten**

Mount the fixture and fasten into the plaster board plug using a 6-8 gauge screw.

**4: Tighten**

Remove screw from anchor, mount fixture, reinsert Screw to into fastener, tighten with screw driver.

DRY WALL & CAVITY ANCHORS

**Bremtoggle™ Gravity Toggles** are pre assembled fasteners consisting of a fully threaded screw, steel retaining nut and a hinged pressed steel toggle bar. Fastening is achieved by passing the hinged toggle bar through the drilled hole and once inserted the toggle bar rotates parallel to the far face of the base material and tightening of the screw draws the toggle up resulting in a broad, positive interlock to the back face of the base material.

**APPLICATIONS**

Light duty fastenings to drywall panels, plaster board, timber boards and hollow blocks.

**FEATURES**

- Fully assembled fastening
- Fast installation
- Maximum holding power in thin boards
- Secure interlocking fastening
- Fully removable
- Fire resistant

**SUGGESTED SPECIFICATION**

**Bremtoggle Gravity Toggle Anchors**

The anchors used shall be preassembled gravity toggle anchors consisting of a carbon steel toggle hinged onto a carbon steel zinc plated screw. Installation shall be in accordance with the manufactures recommendations and all anchors shall be sourced form Bremick Pty Ltd.

**SETTING INSTRUCTIONS**

**1: Drill**

Drill hole through base material to specified diameter.

**2: Insert**

Remove screw and pass through fixture. Reinstall screw into toggle and insert toggle through hole in base material.

**3: Set**

Allow toggle to fall into place and tighten with a screw driver until specified torque is achieved.

**Bremtoggle™ Spring Toggles** are pre assembled fasteners consisting of a fully threaded screw, steel retaining nut and a hinged pressed steel spring actuated toggle bar. Fastening is achieved by passing the closed spring toggle bar through the drilled hole and once inserted the spring is released to open toggle bar behind the base material. Tightening of the screw draws the open toggle bar up against the back face of the base material, resulting in a broad, positive interlocking connection.

**Bremtoggle™ Spring Toggles** are also available in square and round hook types.

**APPLICATIONS**

Light duty fastenings to drywall panels, plaster board, timber boards and hollow blocks.

**FEATURES**

- Fully assembled fastening
- Fast installation
- Maximum holding power in thin boards
- Secure interlocking fastening
- Removable
- Fire resistant
- Available in hook styles

**SUGGESTED SPECIFICATION**

**Bremtoggle Spring Toggle Anchors**

The anchors used shall be preassembled spring toggle anchors consisting of a carbon steel spring toggle mounted onto a carbon steel zinc plated screw. Installation shall be in accordance with the manufactures recommendations and all anchors shall be sourced from Bremick Pty Ltd.

**SETTING INSTRUCTIONS**

**1: Drill**

Drill hole through base material to specified diameter.

**2: Insert**

Remove screw and pass through fixture. Reinstall screw into toggle and insert toggle through hole in base material.

**3: Set**

Allow toggle to spring open and tighten with a screw driver until specified torque is achieved.

#### PERFORMANCE DATA - GYPSUM/PLASTERBOARD

INSTALLATION DETAILS		CAPACITIES IN 10mm THICK GYPSUM / PLASTERBOARD RECOMMENDED LOAD	
Hole/Drill Diameter	Embedment Depth	Tension (NRukc) KN	Shear (VRukc) KN
(mm)	(mm)		
11	M4	0.15	0.30
14	M5	0.15	0.35

All testing was undertaken in plasterboard with a minimum sample rate (n) of 10.  
Recommended Loads have been derived with a minimum factor of safety of 4.  
All Shear Values are Single Shear.

For further performance data, including Characteristic, Working Stress, Limit State Design Values and design data please refer to our Web Site [www.bremick.com.au](http://www.bremick.com.au)

**Bremtoggle™ Plastic Toggles** are a one piece moulded nylon fastener that are used in conjunction with **6g or 8g timber screws**. The toggle unit features a broad flange head and a flat collapsible sleeve. Fastening is achieved by inserting the toggle into a predrilled hole, inserting and tightening a screw that draws the collapsed sleeve tight against the back face of the base material, resulting in a secure interlocked fastening.

## APPLICATIONS

Light duty fastenings to drywall panels, plaster board and thin boards.

## FEATURES

- Versatile
- Economic
- Fast installation
- Secure interlocking fastening.
- Removable
- Corrosion resistant

## ANCILLARY PRODUCTS

Stainless steel self tapping Gauges 6-8g  
*(Bremick Stainless steel book refers)*  
Chipboard screws gauges 6-8g and for all other head configurations see *Bremick Screws and Rivets Product Catalogue*

## SUGGESTED SPECIFICATION

### Bremtoggle Plastic Toggle Anchors

The anchors used in gypsum wall boards shall single piece moulded nylon toggles and are to be used in conjunction with 6g self drilling screws. Installation shall be in accordance with the manufactures recommendations and all anchors shall be sourced form Bremick Pty Ltd.

## SETTING INSTRUCTIONS

### 1: Drill

Drill hole through base material to specified 8mm diameter.

### 2: Insert

Insert toggle through hole in base material.

### 3: Set

Insert a 6g or 8g screw through the fixture and into the toggle. Using a suitable screw driver tighten.

**Bremtoggle™ Plastic Hollow Wall Toggles** are a one piece moulded nylon fastener that are used in conjunction with **6g or 8g timber screws**. The toggle unit features a broad flange head and a winged collapsible sleeve. Fastening is achieved by closing the wings then inserting the toggle into a predrilled hole, inserting and tightening a screw that draws the wings of the sleeve tight against the back face of the base material, resulting in a secure interlocked fastening.

## APPLICATIONS

Light duty fastenings to drywall panels, plaster board and thin boards.

## FEATURES

- Versatile
- Economic
- Fast installation
- Secure interlocking fastening.
- Removable
- Corrosion resistant

## ANCILLARY PRODUCTS

**SUMMARY OF TRADING TERMS****FIS Delivery**

Our company does not pass on the cost of normal freight to customers, providing orders are despatched by our nominated carriers.

**Payment/Credits**

Our trading terms are 30 days from statement date. Consignment stock is not available.

Returns for credit are subject to prior approval and allocation of an acceptance number, without which our warehouse is directed not to receive them. Receipt of goods in this way does not imply agreement to issue a credit note.

Approval of credit can only be considered if the request for credit in writing is received (within 14 days of receipt of goods) showing the credit acceptance number, original invoice number, date and reason for return.

No freight charges for return of goods shall be accepted unless authorised by Bremick.

Products which have been reworked, specially manufactured or zinc plated cannot be returned.

**List Prices**

All prices are Industrial List, current at the time of printing and adopted by leading suppliers and distributors. Relevant trade discounts apply. Tax is not included. All care but no responsibility is taken.

**Fixed Term Pricing**

Some end users request firm (eg, 12 month contract) pricing arrangements. We receive no guarantees in relation to our costs. Increases usually occur without advance notice, resulting from currency fluctuation and in reaction to raw material costs and worldwide demand. Hence we cannot make fixed longterm price undertakings to distributors and do not recommend they do so to end users. However, we can advise anticipated price trends resulting from recent changes in our own costs.

We are unable to commit to a fixed period of prior advice of upcoming price changes (detailed written explanation available on request) but have always worked closely with specialist merchant distributors.

**Romalpa Clause**

1. Notwithstanding anything in these Conditions of Sale contained, expressed or implied or incorporated herein by reference and notwithstanding any rule of law or equity to the contrary and notwithstanding any course of dealing between the Company and the Purchaser, property in goods shall not pass from the Company to the Purchaser unless and until –

- (a) Such goods have been delivered in accordance with these conditions and
- (b) The Purchaser shall have made payment in full for such goods (“the goods”) and
- (c) The Purchaser shall have fully discharged all other indebtedness and other liability (if any) of the Purchaser to the Company on whatsoever account. The Purchaser shall, notwithstanding the foregoing, be empowered as the agent of the Company to sell the goods and shall hold the proceeds of such sale upon trust to apply the same, firstly in payment or otherwise discharging the price payable to the Company for such goods and any other costs of carriage or insurance or other costs or expenses borne by the Company in respect thereof; secondly, in paying or otherwise discharging all the other indebtedness or liability (if any) of the Purchaser to the Company on whatsoever account, which is outstanding at the date that the Purchaser receives such proceeds of sale; thirdly, as to any balance, for the Purchaser’s own use and benefit. Pending the passing of title to the goods the Company may require the Purchaser to mark the goods as being the property of the Company.
